ACADEMIC INTERESTS

Flow Map Alignment, Reinforcement Learning, and Multi-agentic Systems

EDUCATION

2026 – present [Korea Advanced Institute of Science and Technology](#) (GPA: 4.20/4.3)
M.S. in Data Science

2019 – 2026 [Korea Advanced Institute of Science and Technology](#) (GPA: 3.68/4.3)
B.S. in Computer Science; Double Major in Mathematical
Science & Industrial Engineering

EXPERIENCE

Undergraduate Research Intern

Big Data Intelligence Lab, KAIST (Advisor: Jiyoung Whang) *Jun. 2025 – Aug. 2025*
Knowledge Graph Representation Learning, focusing on embedding techniques and link prediction tasks. Also application of these techniques to real-world datasets.

PROJECTS

AI Online Hackathon: Predicting Demand for Food and Restaurant Menu [DACON Link](#)
LG Aimers #7 *Jul. 2025 – Aug. 2025*

Resort food and beverage outlets face highly fluctuating demand influenced by seasons, guest numbers, and events. Built AI models to predict weekly menu sales from real resort data, showing how data-driven forecasting improves inventory, staffing, and customer satisfaction in resort management.

AI Online Hackathon: Predicting Pregnancy Success for Infertile Patients [DACON Link](#)
LG Aimers #6 *Jan. 2025 – Feb. 2025*

Developed AI models that use clinical data from infertile patients to predict pregnancy success and to explore the characteristics that most influence it.

Time-Series Demand Forecasting & Inventory Optimization for Electronic Components
Data Science Contest #3 by LG Electronics (3rd Prize) *Nov. 2023 – Jan. 2024*

Forecasted demand and optimized inventory for electronic components. To handle irregular, sparse demand, applied category-specific forecasting models that improved accuracy; in inventory management, refined distribution assumptions and implemented a customized cross-validation scheme, achieving nearly **50%** reduction in inventory costs.

Prediction of Actual Transaction Prices of Apartments in Cities [Kaggle Link](#)
Course project for IE343 *Apr. 2023 – May. 2023*

Built a machine learning model that predicts apartment transaction prices in Seoul and Busan for the following year, using five years of historical transaction data.
